Center for Climate Resilience and Sustainability

Our center stands as a pivotal educational resource network dedicated to dissecting the specific impacts of climate change on our region. Collaborating closely with the community, local enterprises, and various departments across the UT campus, we are committed to nurturing and implementing sustainable practices. Together, we aim to create a more informed and resilient community ready to adapt and thrive in a changing climate. Opportunities with the Center include faculty and student research projects, community engagement through educational and service activities, and the development of informational resources to implement holistic, sustainable practices.
