

Earth, Energy, and Environmental Sciences - Environmental Science Emphasis, B.S.

Program Description

The Earth, Energy, and Environmental Sciences major is an interdisciplinary study of the relevant natural science disciplines, with emphases in either the Geosciences or the Environmental Sciences. This program provides knowledge and experience through lecture, laboratory, and field courses that immerse the students into the world around them. Students will analyze and solve problems associated with use of energy, water, and mineral resources; in protection of the environment; in planning for the impact of natural hazards; and in sustainable approaches to societal development. The region and ecosystems that surround Utah Tech University provide the ideal laboratory to apply concepts to the earth, energy, and environmental issues that impact the future of humanity. Emphases in the Geosciences and the Environmental Sciences are available depending on the student interests.

Total Hours 124**BS Earth, Energy and Environmental Sciences - Environmental Science Emphasis Program Learning Outcomes**

At the successful conclusion of this program, students will be able to:

1. Consider the interdisciplinary nature of geological, environmental, and energy sciences, as well as their interrelationships with human activity
2. Analyze environmental science issues and propose ethical solutions that account for cross-cultural and historical context at local and global scales
3. Correlate geologic processes with Earth's energy sources and appraise our dependence and exploitation of those sources to support society
4. Critically assess datasets from qualitative and quantitative research methods that explore solutions to earth, energy and environmental science issues
5. Evaluate the effects of geologic time as they pertain to the interactive nature of and changes to Earth systems (Geosphere, atmosphere, hydrosphere, and biosphere)
